

Design Data for CAD model and drawing preparation

Human-readable handoff of the saved preliminary current-basis adapted component geometry. Use the dimensions and coordinate schedules, not scaled illustrations. This report does not regenerate, resize or qualify the equipment.

A = frozen upstream authority; B = documented reference feature; C = approved R1 engineering envelope. A calculated Class-C value remains Class C. Geometry completeness does not establish hydraulic, structural or fabrication adequacy.

No additional revision notes recorded.

Coordinate and datum convention

Right-handed Cartesian coordinates. Origin (0,0,0) is the bottom vessel pole on the shaft/column axis. +Z is vertically upward; X/Y are the horizontal plane. Azimuth 0° is +X, 90° is +Y, increasing counter-clockwise when viewed from above (+Z toward origin).

All length tables and XYZ coordinates below are millimetres; angular values are degrees. The immutable source stores SI metres. Negative Z values belong to the skirt below the bottom vessel pole. Radial shell connections point outward; “up” and “down” connections have vertical axes. Connection centre denotes saved vessel-surface intersection, and end denotes saved external stub termination, not a flange face.

Numeric presentation is rounded to at most six decimal places, without modifying source values or adding manufacturing tolerances. Symbols in the provenance rules refer to SI source quantities: D = column ID, DR = rotor swept diameter, hc = compartment pitch, ds = shaft diameter, do = opening diameter, ts = stator thickness, HR = rotor axial envelope, dh = hub diameter, tb = blade thickness, Lb = blade radial length, HA = installed active height. Do not mix mm table values with SI rule quantities.

Rotor vertex XYZ values are local to the rotor centre plane (Z=0) on the shared shaft axis. Translate local Z by the rotor elevation in the complete schedule; do not apply additional clocking. Support footprints are global XY; combine them with the saved arm bottom/top Z values. Head profiles are internal envelopes, not material outer surfaces.

Head	Tangent Z mm	Pole Z mm	Radial semiaxis mm	Axial semiaxis mm
bottom	175	0	350	175
top	5775	5950	350	175

Each head is the saved half-ellipsoid of revolution: $r^2/a^2 + (z - \text{tangent Z})^2/b^2 = 1$, with semiaxes a/b listed above. Select the half between tangent and pole. This describes the internal geometric envelope only.

The vessel straight internal cylinder uses the frozen column ID and extends between the bottom and top head tangent elevations. No shell outside diameter or material wall thickness is inferred. Model reserved envelopes separately from material-bearing components.

Close the ordered polygon back to vertex 1. The following already-clocked saved 3D vertices define each blade envelope; first and second polygon loops are the opposing thickness faces. Connect corresponding loop vertices. No new blade dimensions are inferred.

Stator geometry and area convention

Physical convention: gross opening fraction = $(DSO^2 + N dh^2)/D^2 = 0.4$. The shaft-corrected value is diagnostic only and is not fed upstream.

Critical clearances

The saved clearances are geometric checks only; manufacturing tolerances, thermal movement and mechanical allowances are not introduced by this report.

Design feature	Saved value	Unit	Provenance / governing rule
Rotor Wall Clearance	234.5	mm	Class C; System-generated recomputed from component solids; no upstream feedback.
Shaft Opening Clearance	34	mm	Class C; System-generated recomputed from component solids; no upstream feedback.
Stator Radial Width	294	mm	Class C; System-generated recomputed from component solids; no upstream feedback.
Rotor Lower Clearance	87	mm	Class C; System-generated recomputed from component solids; no upstream feedback.
Rotor Upper Clearance	87	mm	Class C; System-generated recomputed from component solids; no upstream feedback.

I01-I02-stub-envelope	PASS	Complete outward neck envelopes are disjoint (not merely bore openings).
Vent-drive-seal-envelope	PASS	Vertical vent cylinder clears full drive/pedestal/seal radial envelopes.
Head-connections-internals	PASS	Actual ellipsoid/neck intersection envelopes clear internal supports and shaft lower termination.
Head-shell-connections	PASS	Head connections and straight-shell stubs are axially disjoint.
Approved-hole-count	PASS	84 holes retained; row angles unchanged; any row displacement is the minimum needed for 8mm-lane clearance.
Approved-gross-area	PASS	Computed centre plus 84-hole physical area reproduces inherited gross free-area fraction 0.4.
Approved-shaft-centre-clearance	PASS	Retained preliminary shaft clears the Retained preliminary central opening.
Approved-hub-fit	PASS	Shaft, hub, eye, inherited rotor OD and inherited column ID are nested.
Approved-blade-topology	PASS	Six exact cylindrical-trim blade solids do not overlap at the hub.
Approved-axial-clearance	PASS	32 mm rotor envelope clears the 4 mm boundary plates within inherited 210 mm pitch.
Approved-nozzle-stator-envelope	PASS	Saved radial nozzle OD envelopes are axially disjoint from all Retained preliminary 4 mm stator plates; external interfaces remain on hold.
Approved-support-bracketing	PASS	Saved support envelopes geometrically bracket the Retained preliminary stack; support-wall and shaft interfaces remain preliminary holds.

Limitations and CAD handoff acceptance

Geometrically complete pre-pilot layout only; not fabrication or mechanical qualification.

- Class A: approved frozen Stage-3/4; no hydraulic/sizing recalculation.
- Class B: Perry 8e p15-83 / Pratt-Stevens design envelope; Garthe Table A.1 and Weber-Jupke 2020 DOI 10.1002/aic.16286 construction family.
- End zones are packaging allocations, not separation-performance sizing. Connection bores are geometric allowances, not hydraulic or DN sizing.
- NMP-down/RRBO-up is an explicit layout selection, not inferred from continuity. Vent is crown-region, not absolute-high-point qualified.
- N+1 plates follows selected shared-boundary and terminal-ring topology, not a universal source count.
- Approved component source: approved-component-manifest.json canonical SHA-256 954fd39266e55dbaa2c0c10dcc6578b5a94d9247b1ff95194f0a762b58a32042.
- PRELIMINARY INTERFACE HOLD: retain the existing vessel shell, shaft-support elevations/wall interfaces, drive/seal envelopes and nozzle arrangement pending mechanical interface review.
- Component geometry approval does not qualify support-wall attachments, stator mounting, shaft/hub attachment, strength, vibration or fabrication.
- R5 PRELIMINARY ADAPTATION, NOT APPROVED D600: manifest identifies retained component ancestry, not approval of this generated assembly.
- Rotor/shroud outer radius and stator hole diameter follow inherited rotor OD and gross free area. Row radii change only by the minimum outward displacement necessary to clear the retained 8mm no-hole lanes; count, angles, 130mm eye, 112mm centre and 9mm overlap remain fixed. No 95% turning-area rule.
- Preliminary stator row radii (m): 0.1 → 0.10573658858935844; 0.155 → 0.1575982153039753; 0.21 → 0.21; 0.265 → 0.265. Changed radii resolve actual lane interference only; no hydraulic equivalence asserted.
- Retained component thicknesses are preliminary geometric assumptions, not strength-qualified thicknesses. Materials, shell thickness, support/drive adequacy and fabrication qualification remain unverified.
- Inherited RPM 30 is a zero-width selected point, not a demonstrated operating window.
- Pressure-vessel shell/head thickness and code design
- Shaft strength, deflection, critical speed
- Bearing/seal ratings, drive power/torque and support structural qualification
- Welds, keys, fasteners, flanges, reinforcement and external pipe routing
- Separation residence-time, connection hydraulic capacity and operational venting qualification

Not specified by the approved component basis — outside scope: pressure-rated wall/head material thicknesses; materials and corrosion allowance; welding, tolerances, fits and fasteners; bearing/seal product selection; shaft strength, deflection and critical speed; drive torque/power adequacy; structural loads; nozzle flanges/reinforcement and piping qualification. Do not invent these details or issue fabrication drawings from this report.

No unresolved geometry items recorded in this saved revision. Explicit scope exclusions above are not fabrication-ready details.

PRELIMINARY PRE-PILOT GEOMETRY — NOT FOR FABRICATION
